EXPERIENCE

3D Systems, Product Manager

New York, NY — June 2015 - Present

- Creating single sign and identity management strategy for 3D Systems external customers
- Lead integrating 3DSPRINT desktop software with external services ie JIRA
- Converted Blokify from free app with IAP to paid application significantly increasing app revenue
- Launched Android version of Blokify doubling download market

Blokify, Founder

New York, NY — 2013 - 2015

- Sold to 3D Systems Inc (inventor of 3D Printing) June 2015
- Developed idea for, created design docs, and built & managed team for development of Blokify 3D modeling software for kids
- Raised ~ \$1 million to fund the development and distribution of the Blokify iOS application

Technical Project Manager, Sesame Workshop

New York, NY — 2009 - 2013

- Identified the need for and helped write/find the developer for first HTML5 game on sesamestreet.org (outside of work hours)
- Produced the first bilingual game (Spanish/English) on Sesamestreet.org
- Managed IT rollout for the digital media team of the Sesamestreet.org mobile site, the redesigned parents section, the Google Search Appliance on Sesamestreet.org, & various other projects
- Wrote a significant portion of the front of Sesamestreet.org and redefined templating practice for the Sesamestreet.org digital team
- Managed developers and graphic artists for many Sesamestreet.org web upgrade projects

Technical Project Manager, Karen Harvey Consulting

New York, NY — 2008 - 2009

- Managed the IT budget for a five million dollar consulting firm while working closely with the CEO to insure all IT goals were in line with the company vision.
- Managed a \$60,000 budget and a team of system engineers to replace all existing network equipment in the New York and the London offices increasing profit margins through significantly improved system uptime. Delivered on time and on budget.
- Decreased the company cell phone budget by 35% by restructuring lines.
- Developed and executed comprehensive IT training program for all employees that led to overall improved team capabilities.
- Identified need for a new database, defined: scope, resources, budget, and timeline for the design and development of the custom database.

PROJECTS

Remote controlled treat machine for my dog

- Facetime with my dog Chewie and give her a treat. "The call is actually triggered at the same time as a modified dog treat-dispensing gumball machine, both of which are attached to a Mac mini doubling as a server for the website. Through a combination of Arduino, AppleScript and Python, the system dispenses treats, calling Chewie to the camera, and then calls numbers collected from the website."
